CHUTES, DEFLECTORS AND TRAINING PLATES

H-E Parts International (H-E Parts) is one of the few companies that provides a 'one-stop shop' when it comes to ore processing plant equipment.

Not only is H-E Parts able to design and manufacture chutes, deflectors and training plates; we also offer a full range of ProTech™ wear products including ceramics, chromium carbide overlay and Q&T plate. This fully inclusive approach allows us to tailor-make the most cost-effective wear solution for each application.

- Installation and maintenance
- Fabrication and manufacturing
- Complete range of wear materials

WHY CHOOSE H-E PARTS?

H-E Parts has a dedicated engineering department that is able to design chutes, deflectors and training plates.

We can standardize wear packages to allow for easier and faster install times as well as allowing greater interchange ability of liners to maximize the working life of the equipment.

We are able to design full manufacturing drawings of both the liners and chute.

Our off-site service team can repair the existing parent metal or in conjunction with in-house engineering; manufacture a completely new chute, deflector or training plate.

Through these combined services H-E Parts can deliver a designed and manufactured deflector, chute or training plate complete with a wear package that is ready to install, helping to minimize downtime whilst ensuring maximum throughput.
